

Connecting to the UNCP Network – Apple TV

Connecting the device to the UNCP network involves three steps:

- ✓ Finding the device's MAC address
- ✓ Configuring the device for the UNCP network
- ✓ Registering the device's MAC address with SafeConnect from within BraveWeb

Step One – Locate the device's MAC address

1. After powering up the Apple TV, from the home screen, choose **settings > general > about**. The MAC address needed to register the Apple TV will be listed. Use the wired MAC address if you are going to setup the Apple TV wired with an Ethernet cable or use the wireless MAC address if you intend to setup the Apple TV wirelessly.

Step Two – Configure the device for the UNCP network

1. From the home screen on the Apple TV, choose **settings > Network > Wireless > > Select ResidentialWiFi and done**. The Apple TV will connect to ResidentialWiFi, but you must enroll the MAC address of the Apple TV in BraveWeb before you can use it.

Step Three – Register the MAC address with SafeConnect

1. Register the MAC address via manual device enrollment in BraveWeb. Login BraveWeb at braveweb.uncp.edu. Choose the **Manual Device Enrollment** link, enter your BraveWeb username and password, click "I accept the acceptable use policy" and then click submit.
2. Enter the MAC address of the Apple TV and for Device Type select **media**, click Enroll Device.
3. After enrolling the MAC address, the Apple TV can be used on the UNCP network.
