Connecting to UNCP Network – Roku Player

Connecting your Device to the UNCP network involves three steps:

- Finding the device’s MAC address.
- Configuring your device for the UNCP network.
- Registering your device’s MAC address with SafeConnect from within BraveWeb.

**Step One - Locate your device’s MAC address**

1. After powering up the Roku, from the home screen, choose **settings > about**. The MAC address needed to register the Roku will be listed. Use the wired MAC address if you are going to setup the Roku wired with an Ethernet cable or use the wireless MAC address if you intend to setup the Roku wirelessly.

**Step Two - Configure your device for the UNCP network.**

1. From the home screen on the Roku, choose **settings > Network > Wireless > Setup new Wi-Fi connection > Select ResidentialWiFi and connect**. The Roku will connect to ResidentialWiFi, but you must enroll the MAC address of the Roku in BraveWeb before you can use it.
Step Three - Register the device’s MAC address with SafeConnect

1. Register the MAC address via manual device enrollment in BraveWeb. Login BraveWeb at braveweb.uncp.edu. Choose the Manual Device Enrollment link, enter your BraveWeb username and password, click “I accept the acceptable use policy” and then click submit.
2. Enter the MAC address of the Roku and for Device Type select **media**, click Enroll Device.

3. After enrolling the MAC address, the Roku can be used on the UNCP network.
