Introduction

The Clinical Learning Center (CLC) is dedicated to supporting the vision, mission and philosophy of the McKenzie Elliott School of Nursing at the University of North Carolina at Pembroke (UNCP). The mission of the Clinical Learning Center of the Department of nursing at the University of North Carolina at Pembroke is to provide a safe, supportive, and interactive student-centered learning environment to promote quality multi-cultural education that is congruent with standards of professional nursing practice. This immersive clinical environment will integrate didactic content with innovative hands-on experiences to prepare students with lifelong learning, professional development, clinical decision making, and service to the community. The vision of the Clinical Learning Center is to achieve regional distinction as a leader of excellence in state-of-the-art simulation education to promote excellence in nursing practice through problem solving, critical thinking, and clinical judgement. The CLC strives to design learning activities that replicate true-life clinical situations to the fullest extent, assisting students in their enhancement of critical thinking, clinical reasoning and decision-making skills. Faculty who participates in simulated learning experiences provides students with constructive feedback regarding individual and team performance through debriefing sessions and empower students with the ability to self-analyze their own performance during the reflective process. The CLC follows the University Policy and the Guidelines of our clinical partners.

The following guidelines enhance learning and promote the safety of all participants during learning experiences held in the CLC. It is expected that everyone involved in CLC activities will adhere to these guidelines, including faculty, staff and students. The Director of the CLC will update the contents of this manual as needed and will advise users of these changes as they occur.

General Information

The Clinical Learning Center (CLC) is a state-of-the art simulation facility located on the 2nd floor of the Weinstein Health Sciences Building on the UNCP campus and is utilized by all levels of student nurses. The CLC simulates a hospital setting, as well as a home setting, and is fully equipped for students to practice clinical nursing skills at all levels of nursing practice. It consists of cutting-edge technology in simulation education that is housed within seven individual laboratories: Basic Care, Advanced Care, Pediatric, Maternal/Newborn, Psych/Mental Health, Health Assessment, and the Brenda B. Brooks Home Simulation Apartment. Each lab is thoroughly equipped to provide simulated learning experiences related to healthcare situations that may occur with diverse clients of various cultures across the lifespan. Multiple observation rooms facilitate the video capturing for streaming and recording of simulation activities. The CLC also has a seminar room, housing a flat screen television allowing students to view a variety of educational media, a 40 plus-seat classroom. Details regarding the specific learning labs are provided below:

- **Basic Care Lab:** The Basic Care Lab is equipped with eight advanced care bed units, a centralized nursing station as well as a variety of practice models and mannequins. Students utilize this area to learn and practice basic nursing skills such as bathing, skin care, bed making, feeding, mobility, transferring/positioning, vital signs, medication administration, intravenous line insertion, intramuscular and subcutaneous injections, and urinary catheterization, among many other skills. Each bed site is equipped with wall connections for oxygen administration and suctioning as well as network connections for computers. There is one ceiling-mounted video camera in the lab for the recording of student clinical-based experiences, allowing
- students, as well as faculty, to review the scenario and reflect on individual and team performance. Debriefing sessions take place in the smart-board-equipped seminar area of the lab. This lab also contains a SimMan 3G and METIman manikins.

- **Advanced Care Lab:** Upon entering the Advanced Care Lab, students are greeted by high fidelity SimMan 3G® and SimMan® manikins. These high-fidelity simulators have life-like anatomy and physiologic functionality. They assist faculty to provide simulation-based education that challenge and evaluate students' clinical reasoning skills during realistic client care scenarios (<https://www.laerdal.com/us/>). Additionally, this lab is equipped with a centralized nursing station with eight advanced care bed units and other adult low- and moderate-fidelity manikins. Each bed site is equipped with wall connections for oxygen administration and suctioning as well as network connections for computers. Debriefing sessions take place in the smart-board-equipped seminar area of the lab.
- **Maternal/Child Lab:** The Maternal/Child Lab is equipped with two laboring beds and special high fidelity obstetrical mannequins to simulate the labor and birth process. There are an additional four advanced-care bed units, a nursing station, a newborn radiant warmer, neonatal intensive care isolette, and numerous bassinets. Each bed site is equipped with wall connections for oxygen administration and suctioning as well as network connections for computers. Debriefing sessions take place in the smart-board-equipped seminar area of the lab.
- **Pediatric Lab:** The Pediatric Lab features equipment that is used to care for healthy infants/children as well as those who are premature and/or acutely or chronically ill. This lab is equipped with a nursing station and six pediatric bed units as well as pediatric high-fidelity manikins. Two- SimBaby® manikins have life-like anatomy and physiologic functioning and is used for training during infant emergencies. A pediatric simulator, PediSIM® and Sim Jr., represents a true-to life response to student interventions, providing students the opportunity to immediately witness the consequences of their actions. Each bed site is equipped with wall connections for oxygen administration and suctioning as well as network connections for computers. There is one ceiling-mounted video camera in the lab for the recording of student clinical-based experiences, allowing students, as well as faculty, to review the scenario and reflect on individual and team performance. Debriefing sessions take place in the smart-board-equipped seminar area of the lab.
- **Brenda B. Brooks Home Care Simulation Apartment:** This lab simulates an apartment-style home so that high-tech nursing can be practiced in a low-tech environment. This full-functioning apartment has a kitchen area, dining area, living area, bedroom, and a home-style handicapped accessible bathroom. Due to the generosity of the Brooks family, the home care suite is completely furnished and equipped so that students are able to practice nursing skills in a home-like setting before actually visiting real clients in their homes. This apartment also houses a Virtual I.V. Simulator, enabling students to practice intravenous procedures for all age groups with instant feedback related to technique.
- **Psychiatric/Mental Health Lab:** The psychiatric/mental health lab is equipped with five private interview rooms plus a larger room for simulating group meetings and other group activities with students plus Telehealth availability. The large room is equipped with one ceiling-mounted video camera for the recording of student clinical-based experiences, allowing students, as well as faculty, to review the scenario in order to reflect on individual and team performance.

- **Health Assessment Lab:** The Health Assessment Lab is equipped with eight complete exam units and multiple simulation practice models. Each unit is equipped with a mounted ophthalmoscope, otoscope and sphygmomanometer for blood pressure measurements. As is the case in a healthcare clinic, privacy is provided through the use of drapes and curtains, and students can practice physical assessment skills on various models, as well as on each other, in a private, hands-on clinical setting. There is one ceiling-mounted video cameras in the room for the recording of student clinical-based experiences, allowing students, as well as faculty, to review the scenario and reflect on individual and team performance. Debriefing sessions take place in the smart-board-equipped seminar area of the lab.

The CLC functions to facilitate and enhance learning during various clinical rotations. The CLC is available to students between the hours of 6:00am and 10:00pm. Students needing additional practice with skills and students who require make-up of clinical time are referred to the CLC by clinical faculty. Students desiring extra practice may also schedule an appointment with the CLC director.

Simulation

What is Simulation?

Simulation is an attempt at replicating reality. In healthcare education, simulation serves as a bridge between classroom learning and real-life clinical experiences. Simulation attempts to replicate some, if not all, of the essential aspects of a clinical situation so that the situation may be more readily recognized, understood and managed when it does occur in actual clinical practice. Simulating real-life experiences for students in a safe, simulated environment is conducive for developing psychomotor skill acquisition as well as critical thinking, clinical reasoning, and clinical judgment skills. The CLC allows students to participate in life-like situations using a variety of simulation methods. Low fidelity simulation activities include the use of props and models for the acquisition of skills, such as the use of injection pads to teach proper injection techniques or the use of breast models to teach the proper procedure for breast examination. Students and staff may play the role of simulated clients through role-play, such as when students are learning therapeutic communication or how to obtain a health history. Computer simulations, such as Shadow Health®, provide another alternative for replicating reality. Lastly, the CLC utilizes human simulators, such as METIman, SimMan 3G®, PediSim®, Noelle®, and SimBaby®, which respond in real-time based on student actions, providing a great opportunity for students to put their critical thinking, clinical reasoning and clinical judgment skills into action. The CLC promotes an environment that replicates reality to the highest extent, and practicing in such an environment will increase the probability that acquired skills are used in the real-world setting. The CLC has adapted the simulation design template recommend by the National League for Nursing (NLN) as the foundation for all simulated scenarios throughout the nursing curriculums (see attached template).

Simulation Scenarios

The CLC fosters an active learning environment based on the International Association of Clinical Learning and Simulation, requiring active participation by all students. Students are expected to report to all simulated experiences prepared and ready to actively participate in all simulated experiences. Students and faculty are expected to be professional and respectful of others, including all mannequins and other equipment. Situations simulated in the lab are to be considered learning tools and no discussion regarding the actions of fellow students should take place outside of the lab. A debriefing session, facilitated by faculty, is conducted after all simulated experiences. After the debriefing session, students and faculty will complete an evaluation of the simulated experience, providing them the opportunity to reflect on the experience and to provide constructive feedback to further enhance the simulation for future students.

Debriefing

Debriefing involves a reflective, critical thinking analysis of a simulation exercise. It is an active process, driven by faculty and students, involving the identification and sharing of both the facts and the emotions associated with a simulated experience. The McKenzie Elliott School of Nursing has adopted the Debriefing for Meaningful Learning (DML) model for both clinical and simulation experiences. Review of the (DML) worksheets will occur immediately following the clinical or simulation experience. The DML worksheets are to be handwritten by the student, reviewed by the instructor for completion, and returned to the student. The focus of the debriefing should be a positive experience that encourages students to critically think about what was done, what was not done and what could be done differently in the future using the DML model.

General Clinical Learning Center Guidelines

Orientation to the Clinical Learning Center

All users of the Clinical Learning Center, including faculty, staff and students, are required to complete an orientation prior to utilizing any of the CLC resources. Information to be included in the orientation will include a tour of the facility, demonstrations of proper use of equipment and discussions of the *CLC Policies and Procedures* manual (see attached orientation checklist). The Coordinator of the CLC maintains responsibility for ensuring that this orientation is provided and completed by all users of the CLC.

Clinical Learning Center Code of Conduct/Behavior

1. All faculty and students will adhere to the Clinical Learning Center (CLC) guidelines.
2. All policies in the McKenzie Elliot School of Nursing Student Handbook regarding clinical expectations apply to the CLC.
3. All faculty, staff and students will complete a CLC orientation *prior* to using the equipment.
4. Students are expected to report to the CLC prepared to actively participate in all learning experiences. Professional conduct and communication are expected at all times.

5. Infection control measures utilized in actual client care environments are utilized in simulated care areas. Natural oils found on hands can destroy the mannequin "skin". Hands should be washed before and after all client contact. Gloves are utilized as they are utilized in the actual clinical setting.
6. All mannequins and equipment are treated with proper care and respect as if they were real, human clients.
7. Mannequins are to remain on the beds at all times. Equipment should only be relocated or removed as instructed by the Coordinator off the CLC.
8. Equipment and supplies are returned to their appropriate location upon completion of simulated exercises. Beds should be made and left in their lowest position after each use. Bed rails should be lowered when unoccupied by mannequins. Gowns should be properly placed back on the mannequin after each use.
9. Damaged, missing or malfunctioning equipment should be reported immediately to the Director of the CLC or nursing faculty (see attached form).
10. Ink pens, felt-tipped markers, iodine, betadine, or KY jelly should not be used on or near the mannequins. These items permanently stain task trainers and mannequin skins.
11. Students and faculty are expected to maintain a respectful and safe learning environment for colleagues while participating and observing in simulated learning experiences.
12. Simulated learning experiences are to be used for learning purposes only and no discussion of the scenarios or the actions of fellow students should take place outside of the lab.
13. Personal cell phone use is not permitted in the CLC.
14. Food and beverages are not permitted in any area of the CLC, to include Room 204.
15. Simulation labs are to be used for teaching and learning purposes only and not for personal use. (Ex. Appliances and furniture in the simulated apartment are not to be utilized for personal use by faculty, staff or students.)

Confidentiality

Students are expected to uphold all requirements of the Health Insurance Portability and Accountability Act (HIPAA) and any other federal or state laws requiring confidentiality. In order to preserve the realism of scenarios used in the CLC and to provide an equitable learning experience for each student, all persons utilizing the CLC are required to sign a simulated learning contract and confidentiality agreement each year (see attached form). Students are expected to protect information pertaining to the actions of peers and are expected to keep these experiences within the clinical group for learning purposes only. Students agree to report any violations to the

Coordinator of the CLC or nursing faculty. Simulated experiences have the potential of being recorded, and students must protect these recorded simulations in the same manner they would protect real client situations. Student consents for photography and/or video are obtained during new student orientation. These photos and videos will only be utilized by the CLC for educational and public relations purposes. Students are not permitted to share these recordings/photos with anyone. Any sharing of recorded CLC activities, such as on YouTube, is inappropriate and will result in disciplinary action.

Remediation

Remediation of simulated lab performance as well as actual clinical performance is recommended by clinical faculty on an individual basis. If it is determined that remediation is necessary in the CLC, the student is referred to the CLC utilizing the electronic student referral form located on the CLC Intranet (<https://www.uncp.edu/departments/nursing/forms>). The student is asked to return to the CLC based on the recommendation of the Coordinator, CLC staff or clinical faculty. Students who are referred to the CLC are notified via email within 3 days by the CLC when a plan has been drafted and will collaborate with the CLC regarding the day and time of remediation. Any remediation is documented and kept in the student's permanent file.

Communication

All telephones, iPads and other technological equipment housed in the CLC are to be used for simulation purposes only. Students may utilize personal electronics during any simulation experiences for educational purposes only, and if approved by simulation faculty member. Resources, such as medication references, are housed in the simulation labs for student reference during simulated experiences. Faculty needing to reserve a classroom or laboratory experience in the CLC should submit the electronic request form located on the CLC Intranet (<https://www.uncp.edu/departments/nursing/forms>) at least 4 weeks in advance of anticipated need.

Inventory and Supplies

Supplies required for simulated experiences are provided by the CLC. However, personal clinical supplies such as stethoscopes, penlights, bandage scissors, goggles and pens are the responsibility of students and will not be provided. When supplies are running low or if faculty would like to request additional supplies, the Coordinator of the CLC should be notified. Request for equipment/supplies should be submitted at least four weeks in advance of anticipated need utilizing the electronic request form located on the CLC Intranet (<https://www.uncp.edu/departments/nursing/forms>). Supplies not typically housed within the CLC need to be requested at least 8 weeks in advance to ensure adequate time to order and receive the requests. Reusable supplies should be returned to the same cabinet in which they were found. Students should check for expiration dates on supplies, but it is understood that supplies that are expired are intended for practice purposes only and are utilized for that purpose. Unless soiled, all linen should be refolded and placed back onto the linen cart in each storage area. Needles and other sharps are not to be reused under any circumstance and should be disposed of in the nearest sharps container.

Checking Out Equipment

Faculty, staff and/or students may check out equipment (teaching stethoscopes, models, mannequins, etc.) for teaching/learning experiences as approved by the Coordinator of the CLC. Equipment is checked out and returned directly through the Coordinator of the CLC utilizing the electronic request form located on the CLC Intranet. Equipment must be returned within two weeks of checkout unless pre-approved by the Coordinator of the CLC for an extended checkout period.

Clean Up

All users of the CLC have the responsibility for maintaining the CLC in proper working condition. The center should be left in the manner in which it was found, so that those who follow will have a positive lab experience. All trash should be disposed of appropriately and reusable supplies and resources should be returned to their designated locations. Beds should be remade and left in the lowest position with the bed rails down (if unoccupied by mannequins). Curtains should be placed back against the wall and over-bed tables should be placed at the foot of the bed. Bedpans, urinals, and/or basins need to be washed, dried and placed in the bedside drawers. Soiled linen is placed in covered linen hampers that may be temporarily located in the simulation lab during linen changes and then returned to their storage location in the soiled utility room (bathroom connected to the simulation lab). Linen hamper bags should only be filled to $\frac{3}{4}$ capacity, tied securely and left in the soiled utility room. Soiled linen is washed and dried by the CLC staff utilizing the washer and dryer housed in Home Care Simulation Apartment. Reusable supplies should be restocked when not being used. All faculty members and CLC staff are responsible for replacing sharps containers when they become $\frac{2}{3}$ of the way full, but the CLC Coordinator maintains responsibility for disposing of filled containers appropriately. Lights should be turned off upon leaving the lab area.

Any spray used for lubrication of the mannequins needs to be used sparingly. Mannequins and task trainers in the skills lab are to be cleaned with mild soap and water, rinsed and dried after every use. All tubes, catheters, dressings, tape, etc. must be removed and the area cleaned appropriately upon completion of simulated exercises. Mannequins are to be left in the bed and are not moved unless directed by the Coordinator of the CLC. All injection pads need to be squeezed of any fluid and left to dry. All drainage bags must be emptied, disposed of or cleaned appropriately for later use.

Media: Videos, CD's, and DVD's

The CLC has the capability of displaying a variety of media. Multiple cameras and microphones are located throughout the simulation labs and have the capability of recording all activity in the rooms. Audiovisual equipment should only be utilized by those who have received appropriate training. Recordings are used for educational purposes and debriefing opportunities with the appropriate faculty, staff and students. The confidentiality agreement signed by students protects privacy and discourages inappropriate discussion of video contents or student performance in the simulation scenarios. ***Any unethical viewing or publication outside of the classroom, such as posting on YouTube, is unacceptable and will result in disciplinary action.*** Recorded media is

saved to a backup hard drive in the CLC and is available for student reviewing but shall not be removed from the CLC.

Faculty Preparation before Scenario Simulation

Faculty are expected to provide the Coordinator of the CLC with specific objectives and supplies needed for a simulated experience at least two weeks prior to the scheduled experience (see attached template). It is expected that the clinical faculty for the course will review all simulation scenarios thoroughly prior to the scheduled experiences and work directly with the Director of the CLC to obtain props and equipment. Rehearsing scenarios prior to presenting them to students is extremely important because it provides the faculty time to become familiar with the equipment and supplies being used, the scenario being presented, specific learning objectives, and debriefing points. It also allows faculty to adjust the simulation as necessary so that established objectives are fulfilled. Faculty must schedule a rehearsal time with the Director of the CLC at least one week prior to presenting the scenario to students.

Safety Guidelines

Infection Control

Healthcare workers are occupationally exposed to a variety of infectious diseases during performance of client care activities. Clients are also exposed to a variety of healthcare-associated infections (HAI) from a variety of microorganisms. These infections can be devastating and sometimes even deadly. Wherever client care is provided, adherence to infection control guidelines is necessary to ensure safe care for clients as well as healthcare personnel. Participants of simulated scenarios are expected to adhere to all standard precautions and transmission specific precautions (contact, droplet, airborne) as recommended by the Centers for Disease Control and Prevention (CDC). Simulated clients as well as any equipment coming into contact with them are considered contaminated and must be handled accordingly. Personal protective equipment (PPE) is utilized and disposed of just as it is in actual client situations. Needles and other sharps are placed into the designated sharps containers located throughout the CLC. Students, staff and faculty should notify the Coordinator of the CLC when the sharps containers are 2/3 full so that they can be changed and disposed of appropriately. Students & faculty will adhere to all guidelines as stated by the University in regards to COVID-19.

“Clean” Needle Stick Guidelines

In accordance with the Center for Disease Control (CDC), all sharps are to be handled safely and disposed of properly. In the event of a “clean” needle stick, the Coordinator CLC or nursing faculty should be notified immediately, so first aid can be provided. The CLC should be notified so that an incident report form can be filled out and reported according to the McKenzie Elliott School of Nursing guidelines. Complications from a “clean” needle stick may include: tenderness, minor bleeding or bruising, and infection.

Latex Warning

Students, staff and faculty must be aware that some of the equipment and supplies in the CLC contains latex. Those with a known sensitivity/allergy to latex should contact the Coordinator CLC. Every effort is made to replace equipment with latex-free substitutions. All users who suffer from a latex sensitivity/allergy should take precautions while using or handling latex parts by wearing non-latex gloves.

Security and Emergencies

All faculty members are to ensure that lab rooms are secure and safe when using the rooms. The doors to the CLC should be locked at all times when not in use. University Police and Public Safety should be notified if the CLC is going to be utilized after regular business hours (evenings/weekends). It is the responsibility of the faculty and students to be aware of the location of emergency exits on each floor of the Health Science Building. In case of a fire, all persons are expected to evacuate the building and Police and Public Safety needs to be notified immediately at extension 6235. Fire extinguishers are located upon entering door 207 (area leading to the control room between the Pediatric and Maternal labs) and door 213 (area leading to the control room between the Basic and Advanced care labs). A fire pull alarm and another fire extinguisher is also located at Stairwell A, located across from the Brenda A. Brooks Home Simulation Apartment.

Physical Safety

All students are instructed on safe handling, repositioning and transfer techniques prior to practicing on mannequins and each other. All users should use caution when practicing lifting skills and should not lift a mannequin or heavy object without assistance. Proper body mechanics should be utilized during all simulated practice and clinical experiences. Wheels of all equipment (beds, wheelchairs, stretchers, etc.) should remain locked. A first aid kit is stored in the Basic Care Lab in case injuries should occur. There should be no running in the CLC, and any accident or injury needs to be reported immediately to faculty and/or the Director of the CLC. The Director of the CLC will complete and maintain all incident reports. The incident report is located in each lab, as well as the faculty handbook.

Student Contract (To be submitted electronically)

I have reviewed and had the opportunity to discuss the contents of the UNCP Department of Nursing's *Clinical Learning Center Policy and Procedures Manual* with the CLC faculty/staff. I, as a student enrolled in a UNCP nursing program, agree to adhere to the policies and guidelines set forth. The policies and procedures are subject to change during my course of study and it is my responsibility to keep abreast of these changes.

Student Name: _____

Student Signature: _____ Date: _____

The University of North Carolina at Pembroke
Department of Nursing
Clinical Learning Center
Simulated Learning Contract and Confidentiality Agreement
(To be submitted electronically)

Simulation Contract: The University of North Carolina (UNCP) McKenzie Elliott School of Nursing has incorporated simulated experiences throughout my curriculum to best represent actual client situations. During these simulated experiences, the roles of clients, family and members of the interprofessional team are fulfilled by students, volunteers, faculty and/or mannequins, and I am expected to engage with these actors and/or simulators in a professional and realistic manner. The simulation mannequins are to be used with respect and be treated as if they were real clients. Situations simulated in the lab are to be used as learning experiences; thus, I will respect the roles of my faculty and peers as well as volunteers and follow the Clinical Learning Center's Code of Conduct/Behavior during all simulated experiences.

Confidentiality Agreement: As a user of the clinical learning center, I understand the significance of confidentiality with respect to information concerning simulated clients and fellow students. I will uphold all requirements of the Health Insurance Portability and Accountability Act (HIPAA) and any other federal or state laws regarding confidentiality. I agree to report any violation(s) of confidentiality that I become aware of to my instructor or facilitator and I agree to adhere to the guidelines outlined below:

- All client information, actual or simulated, is considered confidential and any inappropriate viewing, discussion or disclosure of this information is a violation of UNCP McKenzie Elliott School of Nursing policy.
- The simulation center is a learning environment. All scenarios, regardless of their outcome, should be treated in a professional manner. Situations simulated in the lab are to be used as a learning tool and not to be used for humiliation of fellow students.
- I am not to remove, release or make publicly available any documented (written or electronic), observed or recorded client or student information that may be accessible to me as part of a simulated learning experience.
- Simulation and debriefing sessions may be audiotaped and/or videotaped. This recorded information is privileged, and confidentiality must be maintained at all times.

CLC Policies and Procedures: I understand that I must uphold the stipulations outlined in the CLC Policies and the Simulated Learning Contract and Confidentiality Agreement as a component of successful progression in the UNCP nursing program. I have continuous access to the policies and procedures manual (with the option to download for saving/printing if desired) on the CLC Intranet.

Simulation Learning Objectives

General Objectives (Note: The objectives listed below are general in nature and once learners have been exposed to the content, they are expected to maintain competency in these areas. Not every simulation will include all of the objectives listed.)

1. Practice standard precautions.
2. Employ strategies to reduce risk of harm to the patient.
3. Conduct assessments appropriate for care of patient in an organized and systematic manner.
4. Perform priority nursing actions based on assessment and clinical data.
5. Reassess/monitor patient status following nursing interventions.
6. Communicate with patient and family in a manner that illustrates caring, reflects cultural awareness, and addresses psychosocial needs.
7. Communicate appropriately with other health care team members in a timely, organized, patient-specific manner.
8. Make clinical judgments and decisions that are evidence-based.
9. Practice within nursing scope of practice.
10. Demonstrate knowledge of legal and ethical obligations.

Guidelines/Information Related to Roles

Learners in role of nurse should determine which assessments and interventions each will be responsible for, or facilitator can assign nurse 1 and nurse 2 roles with related responsibilities.

Information on behaviors, emotional tone, and what cues are permitted should be clearly communicated for each role. A script may be created from Scenario Progression Outline.

Pre-briefing/Briefing

Prior to report, participants will need pre-briefing/briefing. During this time, faculty/facilitators should establish a safe container for learning, discuss the fiction contract and confidentiality, and orient participants to the environment, roles, time allotment, and objectives.

For a comprehensive checklist and information on its development, go to <http://www.nln.org/sirc/sirc-resources/sirc-tools-and-tips#simtemplate>.

Report Students Will Receive Before Simulation

(Use SBAR format.)

Timing (approx.)	Manikin/SP Actions	Expected Interventions	May Use the Following Cues
0-5 min	(Verbal information provided by manikin or SP should be in quotes so a script can be created for individuals in those roles.)	Learners should begin by: <ul style="list-style-type: none"> Performing hand hygiene Introducing selves Confirming patient ID 	Role member providing cue: Cue:
5-10 min		Learners are expected to:	Role member providing cue: Cue:
10-15 min		Learners are expected to:	Role member providing cue: Cue:
15-20 min		Learners are expected to:	Role member providing cue: Cue:

Debriefing/Guided Reflection

Note to Faculty

We recognize that faculty will implement the materials we have provided in many different ways and venues. Some may use them exactly as written and others will adapt and modify extensively. Some may choose to implement materials and initiate relevant discussions around this content in the classroom or clinical setting in addition to providing a simulation experience. We have designed this scenario to provide an enriching experiential learning encounter that will allow learners to accomplish the listed objectives and spark rich discussion during debriefing. There are a few main themes that we hope learners will bring up during debriefing, but if they do not, we encourage you to introduce them.

Themes for this scenario:

-
-
-

We do not expect you to introduce all of the questions listed below. The questions are presented only to suggest topics that may inspire the learning conversation. Learner actions and responses observed by the debriefer should be specifically addressed using a theory-based debriefing methodology (e.g., Debriefing with Good Judgment, Debriefing for Meaningful Learning, PEARLS). Remember to also identify important concepts or curricular threads that are specific to your program.

1. How did you feel throughout the simulation experience?
2. Give a brief summary of this patient and what happened in the simulation.
3. What were the main problems that you identified?
4. Discuss the knowledge guiding your thinking surrounding these main problems.
5. What were the key assessment and interventions for this patient?
6. Discuss how you identified these key assessments and interventions.
7. Discuss the information resources you used to assess this patient. How did this guide your care planning?
8. Discuss the clinical manifestations evidenced during your assessment. How would you explain these manifestations?
9. Explain the nursing management considerations for this patient. Discuss the knowledge guiding your thinking.
10. What information and information management tools did you use to monitor this patient's outcomes? Explain your thinking.
11. How did you communicate with the patient?
12. What specific issues would you want to take into consideration to provide for this patient's unique care needs?
13. Discuss the safety issues you considered when implementing care for this patient.
14. What measures did you implement to ensure safe patient care?
15. What other members of the care team should you consider important to achieving good care outcomes?

16. How would you assess the quality of care provided?
 17. What could you do improve the quality of care for this patient?
 18. If you were able to do this again, how would you handle the situation differently?
 19. What did you learn from this experience?
 20. How will you apply what you learned today to your clinical practice?
 21. Is there anything else you would like to discuss?
-
