DID YOU KNOW THAT IF YOU’VE BEEN FULLY VACCINATED...

In general, people are considered fully vaccinated:
• 2 weeks after their second dose in a 2-dose series, such as the Pfizer or Moderna vaccines.
• 2 weeks after a single-dose vaccine, such as Johnson & Johnson’s Janssen vaccine.

If you live or work in a correctional or detention facility and are around someone who has COVID-19, you should still get tested, even if you don’t have symptoms.

If you live or work in a homeless shelter and are around someone who has COVID-19, you should still get tested, even if you don’t have symptoms.

You can resume activities that you did prior to the pandemic.

Under certain conditions, you can resume activities without wearing a mask.

Under certain conditions, you can resume activities without needing to stay 6 feet apart from another person.

If you’ve been around someone who has COVID-19, you do not need to stay away from others or get tested unless you have symptoms.
As with any other vaccine, normal side effects are possible, such as:

- Headache
- Fever
- Muscle aches

Consult with health care provider for more information.

**BRINGING IN THE FRESH AIR**

- If it’s safe to do so, open doors and windows as much as you can to bring in fresh, outdoor air.
- If it’s safe to do so, place a fan as close as possible to an open window or door, blowing outside.
- Bringing fresh, outdoor air into your home helps keep virus particles from accumulating inside.
- While it’s better to open windows wide, even having them slightly opened can help bring in fresh air.
- Keep these items on hand when venturing out: face mask, tissues and hand sanitizer with at least 60% alcohol, if possible.
- Consider the safety of yourself and others. Wherever you are (home, car, traveling, outside activities).
- Don’t leave fans unattended with young children.
